

Accelerate Continence Recovery

Elitone for Men is an external neuromuscular stimulation device designed to stimulate and condition pelvic floor muscles in men recovering from prostate surgery.

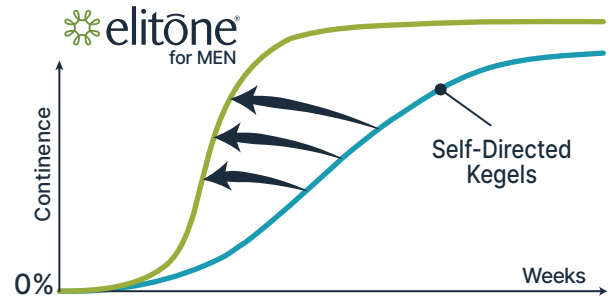

Clinically proven, non-invasive recovery aid

Convenient, at-home, daily protocol as early as 3 weeks after surgery

Integrates into standard 6 and 12 week post-op visits

Standalone therapy or complement to pelvic floor PT

Clinically Proven to Aid Early Recovery

After 12 weeks of use, Elitone for Men **accelerated recovery by more than 1 month** compared to self-directed Kegels.*

92%

Pad weight reduction

vs 65% for comparative control

20.9_{pt}

I-QOL Improvement

vs 2.5_{pt} clinically meaningful threshold

0

Adverse Events

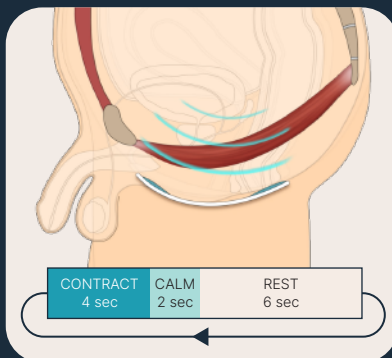

External design reduces risk

*Clinical data on file. Submitted to support FDA-clearance

Targeted Activation

The patented GelPad is applied to the perineal tissue, directly behind the scrotum.

Stimulation is directly delivered to the pelvic floor muscles, achieving both contracting and calming responses.

Elitone Family of Products

40,000 patients have benefited from this patented, perineal-applied neuromuscular stimulation.

Elitone
Female SUI.
Contracts and relaxes pelvic floor

Elitone URGE
Female UUI.
Calms overactive bladder

Elitone for Men
Aids continence recovery after prostatectomy

Getting Back to Normal

- "...offers hope..."
- "...easy to fit in my schedule..."
- "...big improvement..."
- "...not wearing pads..."

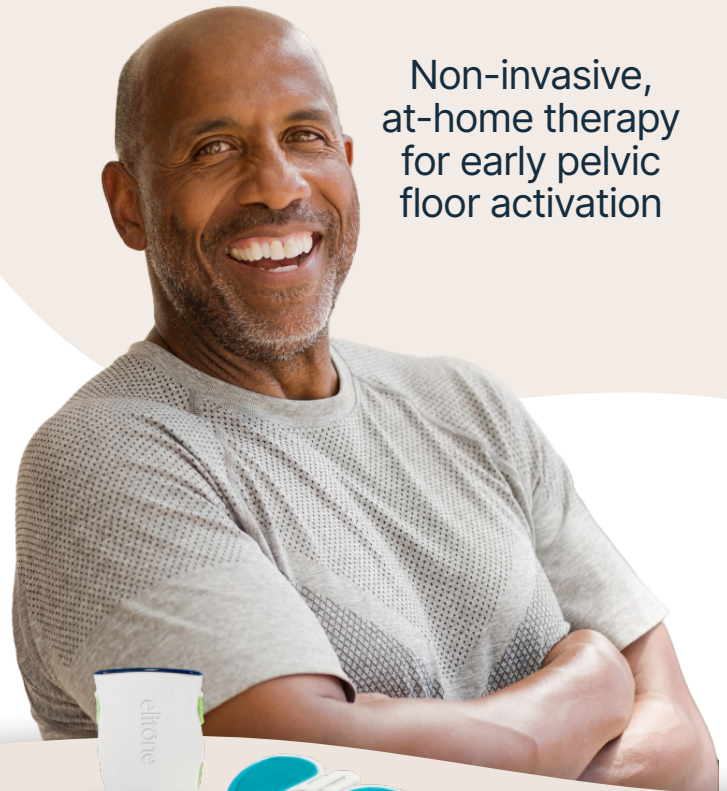

Structured Continence Recovery Program

- Early intervention post-prostate surgery to accelerate continence recovery
- Enhances pelvic floor exercises and physical therapy outcomes
- Supports recovery before considering surgical options

Visit elitone.com/men/clinicians for the latest information on **HCPCS** and **CPT** coding. Elitone for Men is available with and without a prescription.

Accelerate Return to Continence After Prostate Surgery

Non-invasive,
at-home therapy
for early pelvic
floor activation

Indication for Use:

Elitone for Men is a non-implanted muscle stimulator designed to aid early continence recovery in men immediately following prostate surgery.
